

## ***16\_3 Activity Two: Post Secondary Research Project***

For the months of September-April, you will be attending post-secondary education in Saskatoon. In order for you to be prepared financially, you must research the costs that you will encounter in the upcoming year. In order for this to really mean something, you are asked to research, on the web, the following expenses that are the current prices in the Saskatoon area. If there are any expenses that you think you will encounter that are not listed below please feel free to add them to your worksheet.

Things to research:

1. Room and Board
2. Tuition and Books
3. Entertainment
4. Clothes
5. Car maintenance/Parking costs/Bus pass
6. Miscellaneous
7. Any other expenses you think are relevant to you.

Once you have this data you need to make a worksheet similar to the one you made in Activity 1 for this section. You need to make a chart for your data but choose another type other than the one used previously. One example might be for you to make a pie chart. The use of colors is recommended and will make your data visually pleasing to your audience.
